

where vertical  
integration **meets**  
**excellence.**

Our state-of-the-art facilities and industry experience allow us to offer products that meet or exceed industry standards and regulatory requirements.

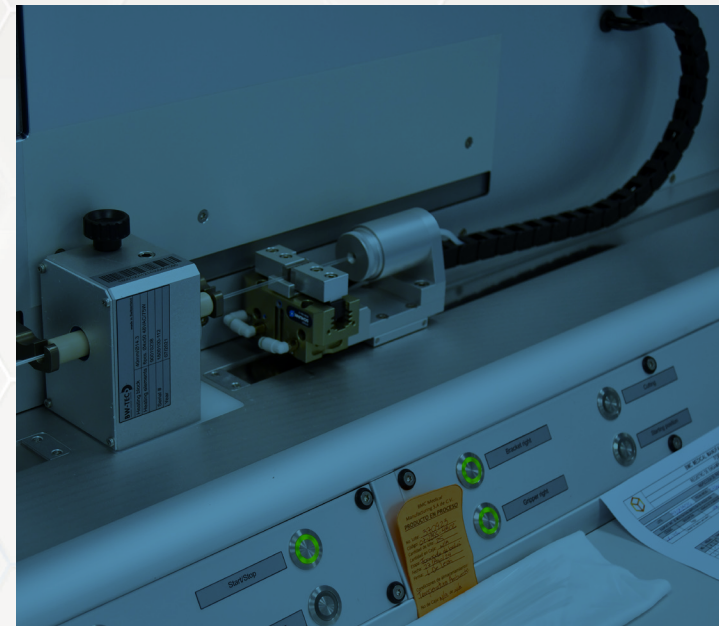

## Partner with Us: Your Manufacturing Partner

### Design Transfer

- ◆ We facilitate the transfer of your product design to our manufacturing process, precisely meeting all specifications.
- ◆ Meticulous planning and execution of each step to minimize risks and ensure regulatory compliance.
- ◆ Validation and prototype development services to ensure manufacturing capability and design functionality before large-scale production.

### Technology Transfer

Thorough supplier evaluations to ensure they meet our strict quality standards and maintain supply chain integrity.

**The First Stents: Stents (tiny tubes used to open blocked arteries) were introduced in 1986 and have revolutionized the treatment of heart disease.**

# Our Commitment to Quality

## Storage Conditions

Strict storage conditions, including controlled room temperature, cooling, and freezing, to preserve the integrity of materials and components.

## Production Line Setup

Complete setup of the production line, including equipment qualifications and accessory development, to ensure optimal efficiency and quality.

## Validations

Rigorous validations of all processes to ensure compliance with regulatory requirements and industry standards.

## Continuous Monitoring

Ongoing monitoring through quality audits to maintain the highest quality standards.

Continuous training for operational staff to ensure consistent compliance and excellent quality in all processes.
